AnalyticalSM

An NSF International Company

Training

“ I attended a Dietary Supplement GMP Training course held by DBA Analytical in Ann Arbor. I found the course material to be very relevant and the instructors to be quite knowledgeable. The course was very helpful in attaining our certification through NSF International. I would highly recommend this course to any of my peers looking to bring their companies into a state of compliance. ”

Training Overview

A company's most precious assets are its people. Training is essential for the maintenance of high standards of quality assurance and GMP. This undeniable fact is forcefully stated by all the regulatory agencies. In the Dietary Supplement GMPs (21 CFR Part 111):

21 CFR Part 111.14(a) "You must have qualified employees who manufacture, package, label or hold dietary supplements."

111.14(c) "Each person engaged in manufacturing, packaging, labeling or holding, or in performing any quality control operations, must have the education, training or experience to perform the person's assigned functions."

And in the Pharmaceutical GMPs (21 CFR Part 211):

21 CFR Part 211.25 "Training in current good manufacturing practice shall be conducted by qualified individuals on a continuing basis and with sufficient frequency to assure that employees remain familiar with cGMP requirements applicable to them."

DBA Analytical assists the dietary supplement industry worldwide in compliance with the regulatory expectations by providing high-quality training on a variety of topics instrumental in understanding regulations and critical to achieving or maintaining regulatory compliance.

Residential Training Courses

DBA Analytical hosts a number of residential courses around the U.S. on topics of current interest to the dietary supplement industry, ranging one to five days. These courses utilize carefully selected speakers from industry and the regulatory agencies with expertise and experience to offer a practical focus on the regulations and the latest regulatory issues.

Our courses attract delegates from all over the world and provide opportunity for attendees to make new contacts and to learn from each other as well as from instructors. See our proposed 2010 Dietary Supplement Training Schedule at www.DBA-global.com.

In-House Training

DBA Analytical can also provide in-house training based upon the residential course series. Since we strongly believe that training is most effective when it is directly relevant to the attendees work performed on a daily basis, we can partner with you to design in-house training courses specifically designed to meet your needs.

We also regularly work closely with clients to develop a comprehensive training program that includes a series of training courses. This comprehensive training could offer general GMP training to specific, modular, task-oriented training for individual departments.
