Certified for Sport®

**Spot the difference. Go for gold.**

There's a reason why Major League Baseball (MLB), the MLB Players' Association, National Football League (NFL), the NFL Players' Association, PGA, LPGA and the Canadian Center for Ethics in Sports (CCES) have all chosen NSF Certified for Sport® to ensure the products their athletes use are safe. NSF's Athletic Banned Substances Program is the only comprehensive program designed for participating manufacturers and their products that includes ISO 17025 accredited product testing methods for 144 banned substances, label content confirmation, formulation and label review, production facility and supplier inspections as well as ongoing monitoring in line with substance prohibitive lists: **WADA, NSF ANNEX A, NFL, MLB and NCAA.**

NSF's service offering is unique at every stage of the game - comprehensive, credible and complete. Let's just see how...

Additional Industry Services	<ul style="list-style-type: none"> <li>• NSF/ANSI 173 - Product and Ingredients certification</li> <li>• cGMP registration</li> <li>• GMP for Sport Registration</li> <li>• Panel experts at major events</li> </ul>

NSF has a successful 60-year history of providing certification programs for food, water and consumer goods. The NSF Athletic Banned Substances Program builds on NSF's expertise in the areas of dietary supplements and functional foods. In fact, NSF developed the only accredited American National Standard to certify dietary supplements, NSF/ANSI 173, and actively maintains the standard even today, using its **ISO 17025** accredited laboratories and extensive manufacturing process evaluation to ensure the actual product contents match those printed on the label.

Now you've got peace of mind. Game on.
