

Dietary Supplements Program

Product Certification in a GMP Registered Manufacturing Facility

When you choose to have your products produced in a NSF GMP Registered facility, you know you are working with a facility that recognizes the importance of product safety and safe manufacturing. It is audited twice per year by an independent third-party organization. This verifies compliance to NSF/ANSI Standard 173 which is the only accredited national standard in the dietary supplement industry and FDA's 21 CFR part 111.

What is Evaluated During a Facility Audit?

Our expert auditors assess:

- personnel
- physical plant and grounds
- equipment and utensils
- production and process control systems
- holding and distribution
- return of product
- product complaints
- records and record keeping
- recall procedures

In getting a GMP registered audit conducted at your manufacturing facility, you are one step closer to getting NSF certified. You are also enhancing your own supply chain security.

Five Simple Steps for NSF Product Certification

- Step 1 - Application
- Step 2 - Label and formulation review
- Step 3 - Facility audit
- Step 4 - Product testing
- Step 5 - Listing of product

What does Testing Involve?

Product testing verifies the identity and quantity of the active ingredients listed on your product label, as well as to ensure it is free of contaminants such as microbiological, aflatoxin, and heavy metals.
