

# STANDARD TRANSITION TIMELINES

 STANDARD RELEASED; BEGIN TRANSITION PERIOD  
 STANDARD SUNSET; END TRANSITION PERIOD

ISO standards are regularly reviewed to determine if a revision is required to keep the standards current and relevant. As ISO standards are updated, they are designed to follow a new, higher-level structure called Annex SL, which allows for easier integration of multiple management system standards. ISO’s flagship quality management systems standard, ISO 9001, was published in September 2015 after over three years of work by experts from nearly 95 participating and observing countries. This revision set into motion a series of cascading revisions to many other management system standards.

NSF-ISR is a leader in management systems registrations and can provide the latest information to clients on updates to the standards. We work with clients to ensure they fully understand the requirements and timing of standard changes. Whether your organization is transitioning to an updated version of a standard or implementing a management system for the first time, we are here to help. NSF-ISR is your partner in simplifying the approach to implementing management systems standards.
