

Auditing

With an extensive auditor network and decades of experience, NSF has the expertise to provide multiple audit services spanning across industries, from consumer goods to OTC's to personal care products; and facilities, from distribution centers to manufacturing plants to retail stores.

Additionally, NSF can conduct combined audits for GMPs, quality or environmental management systems, and food safety services, saving you time and cost.

Auditing

NSF's audit services are flexible, allowing you to determine which service(s) best meet your needs. Your existing audit requirements can be utilized or a customized audit program can be developed for you.

Manufacturing/Production Facility

NSF audits manufacturing facilities to confirm that product quality is maintained during the production process. We can evaluate:

- Adherence to product specification
- Materials and material handling
- Production procedures, record-keeping and facility maintenance

Warehouse/Distribution Center

To help identify safety and quality issues in your supply chain, NSF audits warehouses and distribution centers. Services may include:

- Product rotations, storage and monitoring
- Self-inspections of the facility
- Disposal and documentation

Retail Store

Monitoring product quality doesn't end once a product reaches the store shelf. To ensure accurate representation of your product, NSF offers retail store audits to spot check your products at the critical point of sale and verify:

- Lot codes and expiration dates
- Packaging quality, defects and customer complaints
- Product consistency through random sampling and testing
