

NSF Cosmetics and Personal Care Program

TRAINING AND

Education Services

A company's most valuable asset is its people. Training is essential in maintaining high standards of quality assurance and compliance to current Good Manufacturing Practices (GMPs). Under the globally recognized GMP standard for cosmetics, ISO 22716, personnel should be trained to produce, control and store products with a defined quality.

NSF International's cosmetic and personal care training programs help companies go beyond this requirement. We understand that professionals trained to identify regulatory non-compliances before they become an issue minimize risk and add incredible value to the manufacturing process.

Our instructors are recognized leaders in the industry, providing tangible, real-world case studies of workplace situations and one-on-one interaction. Each course is thoughtfully designed and consists of a mix of lectures and group exercises to maximize learning and retention.

PUBLIC COURSES

NSF International hosts a number of open courses around the globe on topics of current interest to the cosmetic and personal care industries. Instructors and speakers are selected for their expertise and ability to offer practical knowledge on regulations and the latest regulatory issues. Our courses attract people from all over the world and provide an opportunity for attendees to make new contacts and learn from each other as well as the instructors.

TRAINING AT YOUR SITE

Training is most effective when it is directly relevant to the work performed by the attendees. NSF International instructors work closely with companies to design effective training courses tailored to their operations and goals.

Courses can be scaled to multiple facilities worldwide and use a variety of education tools to ensure participants are equipped with the skills they need to meet the demands of their position and add value to the manufacturing process.
