

INTRODUCING INFECTION PREVENTION SERVICES

STAT EPID and EVS Protects

NSF International understands the importance of minimizing healthcare associated infections (HAIs). We believe that the alignment of Environmental Services (EVS) with Infection Control is essential for a truly effective HAI reduction program to safeguard patient safety.

PARTNER WITH NSF INTERNATIONAL TO REDUCE HEALTHCARE ASSOCIATED INFECTIONS

Prevent environmental transmission of pathogens using **STAT EPID** – an environmental monitoring program tailored to your infection prevention and monitoring needs.

- > Environmental contamination monitoring using microbiological methods
- > Monitor for specific pathogens including *C. difficile*
- > Excellent tool for outbreak investigations and evaluating cleaning efficacy

EVS Protects uses personalized scientific methods to align your environmental services with infection prevention.

- > Increases employee productivity and safeguards a contamination free environment.
- > Collects department-specific data to generate recommendations on process improvements, training programs and other department needs.
