

NSF'S AUTOMOTIVE SHOP CERTIFICATION

NSF International's Automotive Collision Repair Shop Certification Program is designed to evaluate and recognize shops that provide high-quality repairs and excellent customer service. Certification enables collision repair shops to demonstrate that an independent, third-party organization evaluated and certified the capability of their facility, procedures, training and internal processes. NSF is the only ANSI (American National Standards Institute) approved standards developer that provides independent repair shop certification.

HOW NSF CAN HELP YOU

- > Certified shops can leverage the NSF brand to consumers, insurers, and other stakeholders.
- > NSF assesses **all** welding technicians for competency. Shops have the freedom to decide how to address any findings.
- > While NSF evaluates training, equipment, and OE repair methods during the audit, the auditor's focus is doing pre-, mid-, and post-repair inspections.
- > NSF auditors do not consult, train or teach so they can provide a complete neutral assessment.
- > With NSF certification, shops can choose their own equipment and where they go for training.
- > For shops that raise the bar and meet repair, quality and customer service requirements, NSF certification differentiates the leaders.
- > As a not-for-profit with over 70 years of independent certification expertise, NSF offers shop certification at an attractive price point. Visit our website for details.

ARE YOU READY?

Is your shop ready to be certified? Visit www.nsfshopcertification.com to complete a 5-minute survey to determine your shop's readiness level or call +1 734 769 5198.
