

HOME PRODUCT CERTIFICATION

NSF International has been testing and certifying products to protect public health and safety since 1944. Our unique expertise and broad range of services make us the premier single source for home product testing and certifications. Our transparency in the testing process and test methodologies is unique and allows us to work with manufacturers throughout the entire product development process.

Certification Benefits

- Brand protection
- Faster speed to market
- Eliminates the need for individual retailer product testing
- Third party validation to assure quality, safety and performance
- One stop shop for regulatory compliance
- Use of the internationally recognized NSF "Certified for Home Use" mark on products
- Product Listing on NSF's public, online directory

With decades of experience testing and certifying products, NSF provides you with quality product testing and certification in an efficient and easy to understand process. One of our dedicated project managers will work with you and guide your certification from start to finish.

HOME PRODUCT CERTIFICATION

Product Evaluation/Testing

NSF evaluates products to stakeholder-reviewed protocols that outline specific review and testing criteria. The NSF certification protocols encompass:

- > All mandatory material safety and labeling regulatory requirements
- > Industry-accepted product performance and quality standards

NSF's innovative and transparent test methods verify product performance, safety and functionality. Vendors will have access to these protocols during the design phase, which helps streamline the testing process. NSF's global network of labs helps ensure timely and cost effective test results.

Annual Monitoring

To verify that the facilities producing the certified products maintain the quality and integrity of the product over time, NSF will conduct an unannounced facility audit within 120 days of granting certification. To maintain product certification, the facilities must be re-audited annually.

Marketplace Testing

Once a product is certified and continues to be on the shelf for 18 months past certification, NSF will conduct marketplace sampling and testing of certified products to ensure they continue to pass critical tests for safety, performance and regulatory compliance.
