

ISO 14001 ENVIRONMENTAL MANAGEMENT SYSTEMS

ISO 14001 Environmental Management Systems is a management tool enabling an organization of any size or type to identify and control the environmental impact of its activities, products or services, improve its environmental performance continually and implement a systematic approach to setting environmental objectives and targets to achieve these goals and to demonstrate that they have been met.

BENEFITS OF REGISTRATION TO ISO 14001

- > Increases efficiency in the use of energy and raw materials, resulting in less waste and reduced costs
- > Manages environmental risks, which can save your company money and improve your public image
- > Increases an organization's ability to comply with environmental regulations
- > Creates a platform from which other environmental health and safety initiatives (such as sustainability) can be developed

WHY CHOOSE NSF-ISR?

Our clients tell us they value our unparalleled environmental management systems (EMS) expertise, responsive customer support, excellent value and international recognition. No other registrar has NSF-ISR's long history with EMS. We were one of the first registrars to become accredited through the ANAB national accreditation program, and invested early in the EMS standards process to better understand the implementation and interpretation issues important to our clients. Because we helped to write the ISO 14001 standard, our knowledge lets us focus on what is most important in your EMS and provide you meaningful feedback for system improvements.

ISO 14001 ENVIRONMENTAL MANAGEMENT SYSTEMS

ISO 14001: 2015 REVISION

Published on September 15, 2015, ISO 14001:2015 has an emphasis on improvements to reflect the latest industry trends. NSF-ISR has transition resources, including webinars, transition guides and upgrade checklists at www.nsf.org/info/iso-updates.

Key improvements in the 2015 version include:

- > A greater commitment from leadership
- > An increased alignment with strategic direction
- > Greater protection for the environment, with a focus on proactive initiatives
- > More effective communication, driven through a communications strategy
- > Life-cycle thinking, considering each stage of a product or service, from development to end of life
- > More emphasis on environmental performance and measurement
