

WHAT DOES IT TAKE TO BE NSF GMP REGISTERED?

GMP Registered
Dietary Supplements

A foundation to a company's commitment to quality starts with NSF International's GMP Registration for Dietary Supplements, one of the most respected GMP Registration programs in the industry.

What does it take for a company to achieve NSF GMP Registration?
The process consists of 5 easy steps:

1 Once a company has decided to seek NSF GMP Registration, NSF sets up an initial audit at its facility.

2 An NSF auditor conducts a thorough on-site audit, including review of SOP's, quality systems, equipment, training records and more, noting any non-conformances to be addressed for compliance.

3 The company submits corrective action plans to NSF's technical review team to meet compliance.

4 Once all corrective actions are approved, the facility will become NSF GMP Registered and appear in NSF's official online public listings at nsf.org.

5 The company must then maintain its NSF GMP Registration with a monitoring audit, taking place twice annually.

When you know a company is NSF GMP Registered, you can be confident of its commitment to one of the highest levels of quality!
