

ENVIRONMENTAL SERVICES

Companies are essential to a sustainable future, and operating sustainably is essential for a company’s success. This symbiotic relationship underscores the necessity for an organization to have a deep understanding of their environmental impacts.

Organizations that heed the call for improved efficiency and resiliency are in the best position to prosper in a low-carbon and resource-constrained economy. Identifying and mitigating environmental risks leads to comprehensive strategies that reduce or contain costs, increase flexibility and capitalize on opportunities—even in a changing climate.

Key stakeholders expect companies to imbed sustainability into their business strategy, and to demonstrate they can thrive in any climate scenario. NSF International’s Environmental Services can help.

STEP 1

Choose Pathway(s)

STEP 2

Choose Sustainability Focus(s)

STEP 3

Choose Any Engagement Phase

NSF’s Environmental Services are designed to meet companies’ needs by assisting in four distinct pathways. We assist companies and organizations at any stage in their sustainability journey—from planning and strategy, to implementation and verification. This breadth of expertise and diversity of service offerings enables NSF to successfully engage with a broad range of clients, and become a one-stop shop for their corporate sustainability priorities.

ENVIRONMENTAL SERVICES

EXPERTISE AREAS

NSF International's Environmental Services professionals work with companies in any industry and size, and have exceptionally deep expertise in the following sectors:

ABOUT NSF INTERNATIONAL

Confidence comes from working with an organization with over 70 years of experience in public health and safety.

- > We provide a full breadth of environmental services—from consulting to verification—in the focus areas of energy, water, materials and land.
- > We engage with all clients, regardless of industry or sector, and can assist at any stage of readiness—from planning and strategy development to implementation and verification.
- > We help to identify, prioritize and capitalize on data-driven and cost-effective sustainability opportunities, and with innovative software solutions.
- > Our professionals have the reputation, scope and experience to help determine and manage sustainability impacts for products/processes, projects, facilities and supply chains.

We aim to become a strategic partner for companies striving to reduce their environmental burdens at the product/process, project, facility, and supply chain levels by offering services in key sustainability impact areas such as energy, water, materials and land. We work alongside companies to identify key risks and mitigation opportunities—regulatory or non—and provide a clear vision for how to set, surpass, and communicate science-based sustainability targets to stakeholders. Furthermore, we strive to provide thought leadership and innovation to the broader sustainability community.
