

PRODUCT EVALUATION TESTING AND CONSULTANCY SERVICES

NSF International's laboratory in the United Kingdom is one of the world's largest testing laboratories for water fittings. Specializing in testing and approvals designed specifically to increase your sales and comply with national requirements, our product evaluation team can support you in the below areas.

TESTING TO STANDARDS AND BESPOKE TESTING

Capable of conducting internationally recognized product testing against European and British standards, our laboratory team at our facility in Wales can offer you third-party approvals or UKAS accredited testing certificates.

As an affiliate member of the Bathroom Manufacturers Association, we can conduct testing to the European Water Label (EWL) requirements. These test results can be used to qualify your product to the EWL scheme.

As the current test house for the Department for Environment, Food & Rural Affairs (Defra) scheme in the UK, we can offer testing to the Water Technology List requirements. You can use the test results in conjunction with the Defra scheme to gain enhanced capital allowance on your products.

BUILDING REGULATION COMPLIANCE

In the United Kingdom and throughout Europe there are stringent standards reinforced by local building regulations on newly built properties. To legally sell and fit a heating system in the United Kingdom, you need to show compliance with Approved Document G: *Sanitation, hot water safety and water efficiency* (2015 edition with 2016 amendments), specifically Section 3. To ensure you're fully compliant, NSF International can support and test all heating systems to the European safety standard EN 12897 or the British standard BS 7206, which are referenced in this document.

PRODUCT EVALUATION TESTING AND CONSULTANCY SERVICES

TECHNICAL CONSULTANCY

NSF International's product evaluation team at our office in Wales can offer a fully tailored and unique technical consultancy service to ensure your product is designed with every possible approval requirement in mind.

Our product evaluation team have a 100 percent pass rate at point of approval on products developed through this process over the past 24 months.
