When entering the competitive filtration marketplace, it’s important to consider if your product has the right certifications to stand out. The most common certifications for filtration systems are NSF/ANSI 42, 53 and 401, which certify that a product reduces a particular set of contaminants from drinking water.

**NSF/ANSI 42: DRINKING WATER TREATMENT UNITS – AESTHETIC EFFECTS**

This standard establishes minimum requirements for systems designed to reduce non-health-related contaminants.

<table>
<thead>
<tr>
<th>SCOPE</th>
<th>Point-of-use and point-of-entry systems</th>
</tr>
</thead>
<tbody>
<tr>
<td>CLAIMS</td>
<td>Chlorine, taste and odor, chloramine, particulate, iron, manganese, zinc and total dissolved solids (TDS)</td>
</tr>
<tr>
<td>TESTING</td>
<td>Material safety, structural integrity and specific aesthetic-related contaminant reduction claims (claims vary by product)</td>
</tr>
</tbody>
</table>

**NSF/ANSI 53: DRINKING WATER TREATMENT UNITS – HEALTH EFFECTS**

This standard establishes minimum requirements for systems designed to reduce specific health-related contaminants.

<table>
<thead>
<tr>
<th>SCOPE</th>
<th>Point-of-use and point-of-entry systems</th>
</tr>
</thead>
<tbody>
<tr>
<td>CLAIMS</td>
<td>This standard offers over 50 contaminant reduction claims. Some of the most popular include: lead, Cryptosporidium, VOCs and chromium.</td>
</tr>
<tr>
<td>TESTING</td>
<td>Material safety, structural integrity and specific health-related contaminant reduction claims (claims vary by product)</td>
</tr>
</tbody>
</table>

Not sure which standard fits your product?

This piece covers the main industry standards for filtration systems, but NSF also offers certifications specific to reverse osmosis, UV filtration systems and water softeners. Contact us for more information on those standards/certifications.
NSF/ANSI 401: EMERGING COMPOUNDS/INCIDENTAL CONTAMINANTS

This standard addresses the ability of a water treatment device to remove up to 15 individual contaminants which have been identified in published studies as occurring in drinking water. The contaminants covered in NSF/ANSI 401 have been detected in drinking water supplies at trace levels and can affect some consumers’ perception of drinking water quality.

<table>
<thead>
<tr>
<th>SCOPE</th>
<th>Point-of-use and point-of-entry systems</th>
</tr>
</thead>
<tbody>
<tr>
<td>CLAIMS</td>
<td>This standard offers up to 15 specific contaminant reduction claims. Some of the most popular categories include prescription drugs, over-the-counter medications, herbicides, pesticides and chemical compounds.</td>
</tr>
<tr>
<td>TESTING</td>
<td>Material safety, structural integrity and specific emerging compounds/incidental contaminants outlined in the standard.</td>
</tr>
</tbody>
</table>

WHAT YOU CAN EXPECT WHEN GETTING CERTIFIED TO NSF/ANSI 42, 53 AND 401

Certification to any of these filtration standards follows a simple process:

1. **APPLICATION**
   - Your company submits an application.

2. **SUBMISSION**
   - You provide product formulation, toxicology and product use information.

3. **REVIEW**
   - Our technical team reviews formulations and/or parts lists.

4. **ON-SITE AUDIT**
   - We perform an on-site audit of the production facility and collect/request samples.

5. **TESTING**
   - Our laboratory conducts testing.

6. **TECHNICAL EVALUATION**
   - We complete a final technical evaluation.

7. **CERTIFICATION**
   - NSF certification is granted (and maintained annually).

WHY CHOOSE NSF TO CERTIFY YOUR PRODUCTS?

NSF International is the world leader in testing and certification for drinking water products, including water filtration systems. When you work with us, you can always expect these benefits:

- Use of the NSF mark
- Dedicated account managers
- Expert technical staff
- In-house laboratories

NSF INTERNATIONAL
