Chemicals provide an effective way to treat drinking water and water in food or beverage facilities.

Sometimes, the same chemicals can be used for both purposes. However, they may be subject to different rules and regulations depending on their end use.

When looking for water treatment chemicals, it is important to consider the industry they are used in, as well as the end use for which they have been reviewed or tested. Chemicals used to treat water in food or beverage processing facilities may be registered under the G category codes for water treatment products in NSF’s nonfood compounds registration program. Chemicals used to treat drinking water may be certified to NSF/ANSI/CAN 60: Drinking Water Treatment Chemicals – Health Effects.

The below table describes the scopes of both the NFC registration program and the standard 60 certification.

## Nonfood Compounds Registration G Category

Continuation of the **U.S. Department of Agriculture (USDA)** compound approval and listing program. Based on meeting applicable regulatory requirements including the **U.S. Food and Drug Administration (FDA)**’s 21 CFR (Code of Federal Regulations) or other applicable regulations.

### Regulation background
- American and Canadian National Standard for evaluation of water treatment chemicals based on meeting **U.S. Environmental Protection Agency (EPA)** and **Standards Council of Canada** drinking water requirements. Required in most U.S. states and Canadian provinces/territories.

### Evaluation method
- **Formulation review**
- **Label review**

### Mark
- NSF registration mark with applicable category code

### Listings
- NSF’s White Book™ listings: [www.nsfwhitebook.org](http://www.nsfwhitebook.org)

## NSF/ANSI/CAN 60: Drinking Water Treatment Chemicals – Health Effects

American and Canadian National Standard for evaluation of water treatment chemicals based on meeting **U.S. Environmental Protection Agency (EPA)** and **Standards Council of Canada** drinking water requirements. Required in most U.S. states and Canadian provinces/territories.

### Evaluation method
- **Formulation review**
- **Contaminants concentration evaluation**
- **Label review**

### Mark
- NSF/ANSI 60 certification mark – to be used until December 2024.
- NSF/ANSI/CAN 60 certification mark – can already be used, mandatory after December 2024.
